Python-calculator-git-workflow

Step 1 — Create the calculator project folder

cd ~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects

mkdir -p 03-git-github/python-calculator-git-workflow/docs
cd 03-git-github/python-calculator-git-workflow
touch calculator.py README.md .gitignore

└── git-workflow.md

Step 2 — Add your basic Python calculator

vi calculator.py

```
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github$ pwd
/home/sravan/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github$ mkdir python-calculator-git-workflow
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github$ ls
python-calculator-git-workflow
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github$ cd python-calculator-git-workflow/
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow$ pwd
/home/sravan/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow$ mkdir docs
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow$ touch calculator.py README.md .gitignore
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow$ ls
README.md  calculator.py  docs
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow$ rm calculator.py README.md .gitignore
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow$ ls
docs
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow$ cd docs/
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow/docs$ touch calculator.py README.md .gitignore
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow/docs$ ls
README.md  calculator.py
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow/docs$ ls -la

else:
    print("Invalid operation. Please enter +, -, *, or /.")
```

Step 3 — Create your README and .gitignore

vi README.md

vi .gitignore

This prevents common temporary files and local environment files from cluttering the repository.

Step 4 — Git commit

git add 03-git-github/python-calculator-git-workflow/

git commit -m "feat: add basic Python calculator"

git push origin main

```
ravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects$ pwd
/home/sravan/cloud-devops-multicloud-AWS-AZURE-python-ai-projects
ravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects$ git status
On branch main
Your branch is up to date with 'origin/main'.

remote:      https://github.com/SravanBoosa/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/pull/new/feature/add-floor-division
remote:
To https://github.com/SravanBoosa/cloud-devops-multicloud-AWS-AZURE-python-ai-projects.git
 * [new branch]      feature/add-floor-division -> feature/add-floor-division
Branch 'feature/add-floor-division' set up to track remote branch 'feature/add-floor-division' from 'origin'.
```

Open first pull request

1. Open your portfolio repository on GitHub.

2. Choose the option to compare your pushed branch or create a pull request.
3. Set the base branch to main and the compare branch to feature/add-floor-division.
4. Use the title Add floor division to calculator.
5. Review the changed lines and create the pull request.
6. Merge the pull request on GitHub once you've reviewed it.

After merging, update your local main branch:

git checkout main
git pull origin main

```
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow/docs$ git checkout main
Already on 'main'
Your branch is up to date with 'origin/main'.

```

What you learned: A branch isolates work; a commit records it; pushing publishes it; a pull request enables review; merging integrates it into main; and pulling retrieves the merged change.

Step 6 — Feature branch 2: Add modulus

git checkout -b feature/add-modulus

vi calculator.py
add the below code

print("% Modulus (remainder)")

elif operation == "%":
if num2 != 0:
result = num1 % num2
print("Result:", result)
else:
print("Error: Cannot calculate remainder with zero.")

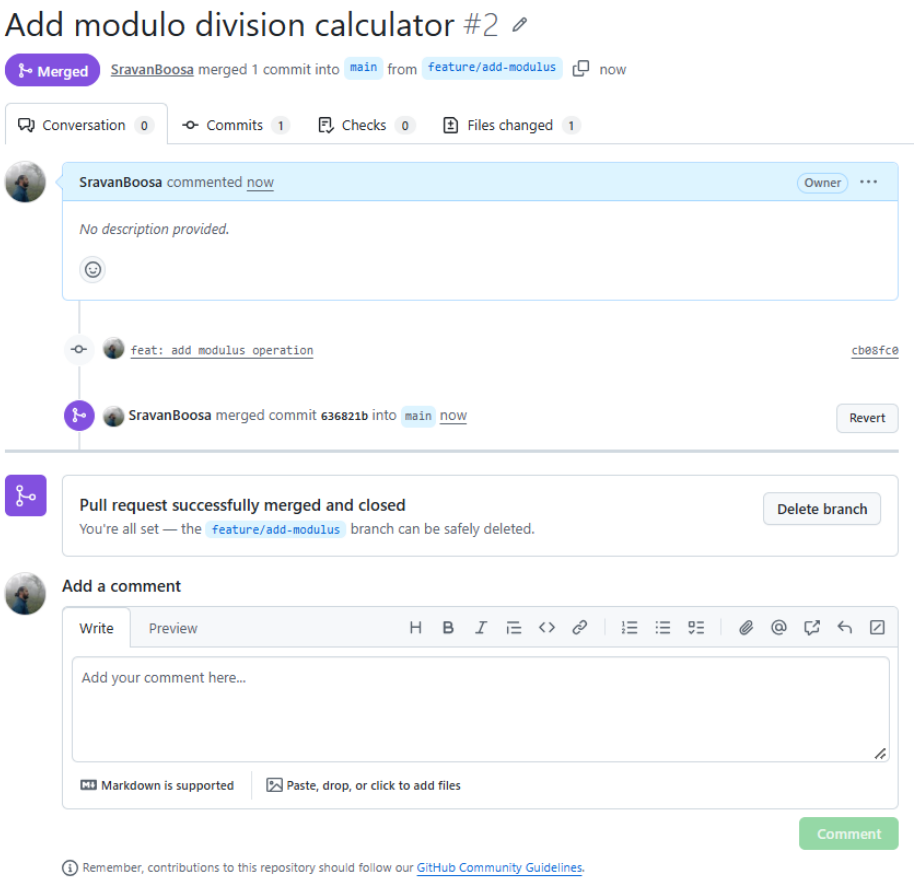

git add .

git push -u origin feature/add-modulus

```
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow/docs$ git checkout -b feature/add-modulus

```

Step 8 — Deliberately create and resolve a merge conflict

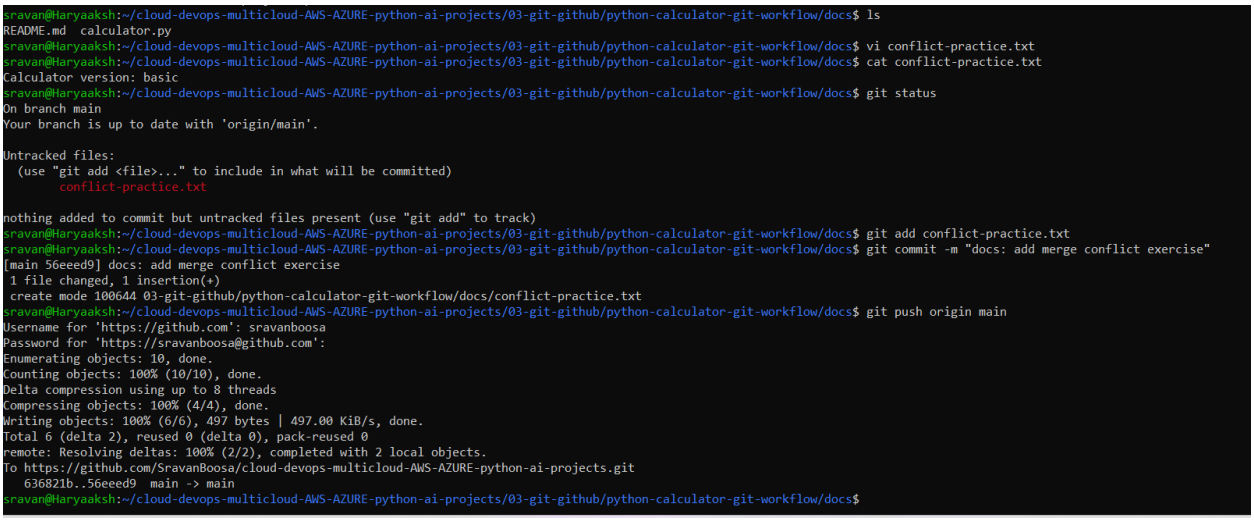

This is a key hands-on Git exercise. Change the same line on two different branches to make Git detect conflicting changes.

First create a practice document:

vi conflict-practice.txt
Calculator version: basic

Commit the starting file on main:

git add conflict-practice.txt
git commit -m "docs: add merge conflict exercise"
git push origin main

Branch floor-division: Change the line to Calculator version: branch floor-division, then commit it.

git checlout feature/add-floor-division

Calculator version: branch floor-division

git add .
git commit -m "test: update calculator version on branch A"

Branch modulus: Return to main and create a second branch from it.
Change the line to Calculator version: branch modulus operator, then commit it
git checkout feature/add-modulus
Calculator version: branch modulus operator

Git add .

Git commit –m “ **update calculator version in modulo branch**”

Git checkout main

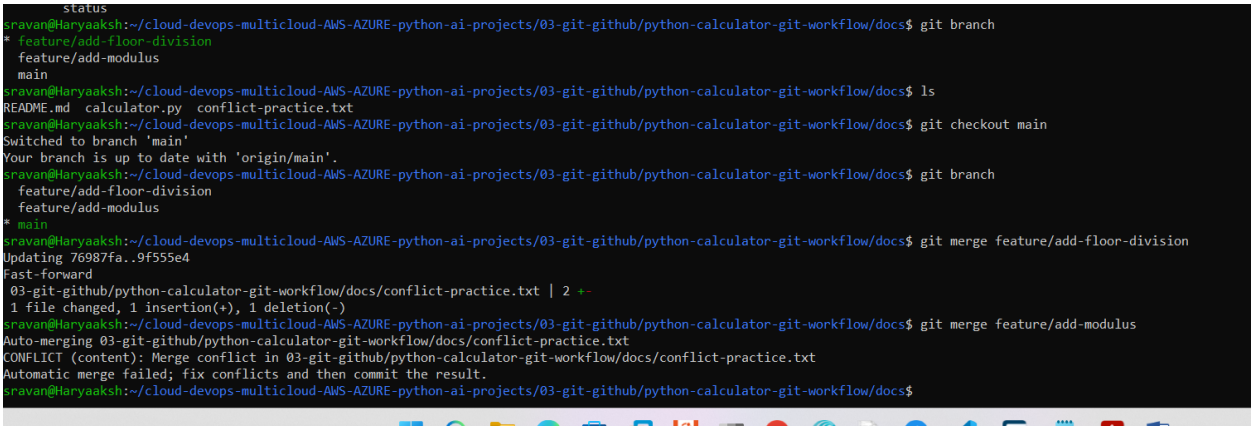

Git merge feature/add-floor-division

Git merge feature/add-modulus

Auto-merging 03-git-github/python-calculator-git-workflow/docs/conflict-practice.txt

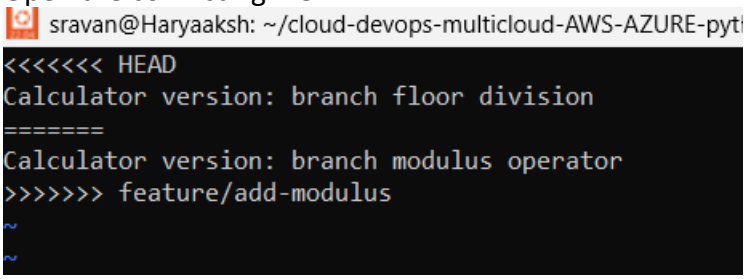

CONFLICT (content): Merge conflict in 03-git-github/python-calculator-git-workflow/docs/conflict-practice.txt

Automatic merge failed; fix conflicts and then commit the result.

The second merge should report a conflict because both branches changed the same line differently.

Open the conflicting file:

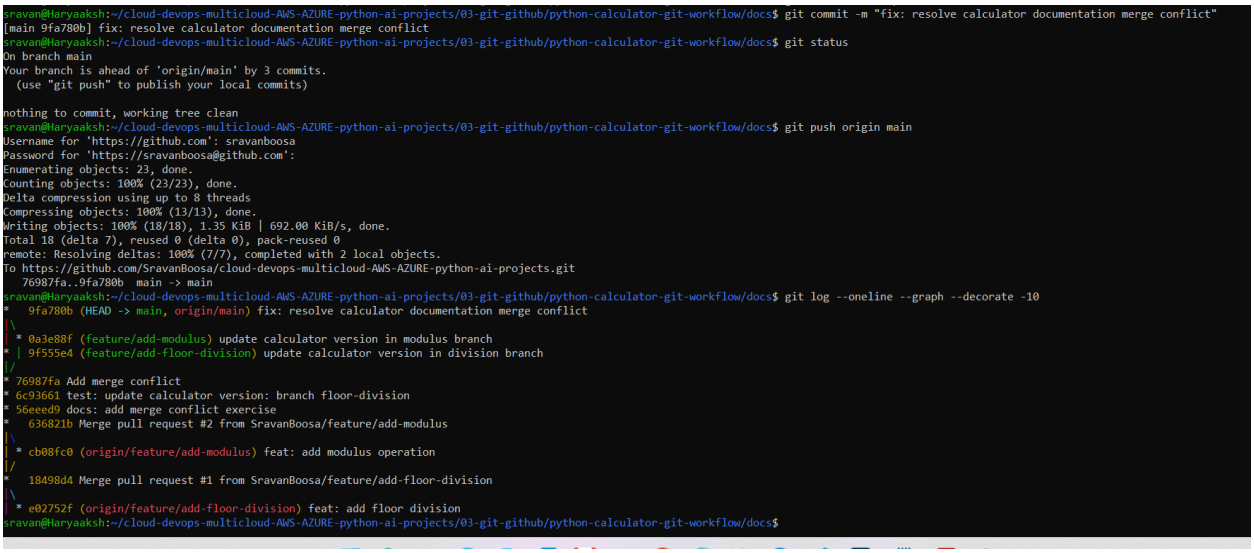

Remove all the conflict markers,
modify
Calculator version: branch floor division and branch modulus operator with Git conflict practice

Git commit

Git push origin main

git log --oneline --graph --decorate -10

Step 9 — Document your Git workflow

Vi git-workflow.md
git add git-workflow.md
git commit -m "docs: record Git workflow practice"
git push origin main

```
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow/docs$ vi git-workflow.md
sravan@Haryaaksh:~/cloud-devops-multicloud-AWS-AZURE-python-ai-projects/03-git-github/python-calculator-git-workflow/docs$ git status
